Amendments to the Specification

Please amend Paragraph [0004] a follows:

The GGSN 110 performs a function of a gateway for interworking between the GPRS network 10 and the Internet 20 or an external packet network (not illustrated). The SGSN 120 is connected to the GGSN 110 through the GPRS network 10, manages the mobility of a mobile terminal (MT) 30 in a packet mode, and performs a function of a packet switch. The HLR 130 is connected to the GGSN 110 and the SGSN 120, and manages subscription information and location information of a subscriber. The BSC 140 ~~130~~ controls and manages the BS 150 ~~140~~, and the BS 150 ~~140~~ manages radio resources and transfers data by allocating a traffic channel. Also, the MT 30 denotes a subscriber's terminal that can receive a packet service.

Please replace Paragraph [0043] with the following:

IP Address	IMSI Field	Packet Destination Call Filtering Information Field
150.150.1.1	450000134550001	Activation/Inactivation Information Permission Condition Information -Source IP: 150.150.1.0/24 -Protocol Identifier: TCP -Destination Port No.: 8080
